

## PRESS RELEASE

### ALSYS acquires InovaYa to accelerate the deployment of innovative water solutions

**Salindres / Lyon — October 1, 2026** — Industrial group ALSYS announces the acquisition of InovaYa, a French impact-driven company specializing in water treatment, drinking water production and water reuse.

This acquisition strengthens ALSYS's expertise in the water sector by integrating InovaYa's technologies and know-how. It combines ALSYS's industrial capabilities and resources with InovaYa's technological expertise and strong culture of innovation and impact, with a shared ambition: to accelerate the development and deployment of solutions addressing the water challenges faced by industries, local authorities and NGOs.

#### Two complementary areas of expertise

Founded in 2018, InovaYa's mission is to preserve water resources and make water accessible to all. The company develops proprietary filtration and water treatment technologies and supports industries, local authorities and NGOs in addressing their needs in drinking water production, water reuse and sustainable water management. Recognized in France as an ESUS company (*Entreprise Solidaire d'Utilité Sociale*) and a JEI (*Jeune Entreprise Innovante*), InovaYa joined the Impact 120 program of Mouvement Impact France and the Greentech Innovation program in 2026.

With roots dating back to 1990, ALSYS is an international industrial group specializing in membrane technologies, catalysis, advanced materials and process engineering. Its various entities develop solutions in areas including filtration, purification, fluid and water treatment, as well as environmental applications, with a presence across Europe, North America and Asia.

This complementarity provides the foundation for the transaction between the two companies: InovaYa's technological expertise and agility complement ALSYS's industrial capabilities, resources and international footprint.

#### François Garcia, President of ALSYS:

*"With InovaYa, we are bringing recognized technological expertise in water treatment into the ALSYS Group, together with a strong culture of innovation and impact. We intend to leverage our industrial know-how and resources to support the development of InovaYa's technologies and accelerate their industrialization and deployment."*

**Khaled Al Mezayen, President of InovaYa:**

*"This acquisition marks a new chapter for InovaYa. By leveraging ALSYS's industrial capabilities and resources, we will be able to accelerate the development and deployment of our solutions and take them to a new level, in support of water resource preservation."*

**A new platform for scaling up**

For ALSYS, the integration of InovaYa strengthens the Group's capabilities in the water sector and expands its portfolio of solutions through InovaYa's expertise and technologies.

For InovaYa, joining the ALSYS Group is expected to accelerate the industrialization of its technologies and their deployment in new markets, leveraging the capabilities and resources of an international industrial group.

Together, the two companies aim to combine their expertise, technologies and resources to address growing needs in water treatment, drinking water production, water reuse and sustainable water management for industries, local authorities and NGOs.
